## E-Auction Management System

### GROUP MEMBERS:-

Khushi Desarda (TEITA121)

Sanjana Gandhi (TEITA132)

Tejal Gandhi (TEITA133)

Saylee Gulve (TEITA140)

## **Problem Statement :-**

- Students are expected to design minimum of 5 web pages using CSS for the problem statement chosen in assignment no. 4. Apply CSS properties Border, margins, Padding, Navigation, dropdown list to page.
- To create an Auction Management System database to store the records of Buyer, Seller, Admin and Products.

## **Interface Details :-**

- Online Auction management system is a web based application which will assist clients with buying or selling items; they can sell anything they want by posting advertisements. This application will enable clients to post their items for auction; bidders can create an account and are able to bid for any available product.
- There are some current applications that offer clients to bid on products but these aren't available in the local area, which is a disadvantage because you are unable to look at the product before you buy.
- With this Online Auction application clients will be able to bid for products that are available in their local area.
